Rubric Assignment 2

Component	Marking Criteria	Marks
Task 1 — Download Dataset (2%)	• Correct dataset downloaded from SartajBhuvaji/Brain-Tumor-Classification-DataSet (GitHub)• Evidence of access and storage of dataset	**2%**
Task 2 — Dataset Organization (2%)	• Dataset correctly placed under xai-series/data/brain_mri• Train/test subfolder structure is valid and usable for 05_lrp.py	**2%**
Task 3 — XAI Implementation (10%)	**LRP (Layer-wise Relevance Propagation)**:• MRI images processed correctly• Relevance heatmaps generated & explained**+ second XAI method (e.g., Grad-CAM / IG / LIME / RISE)**:• Correct implementation and visuals**Overall**:• Explanations relate back to tumor classification model• Visualizations are readable and medically meaningful	**10%**
Task 4 — Explanation Presentation (Communication of XAI Insights)	**As Doctor to a Patient (3%)**:• Simplified non-technical explanation• Uses XAI visuals to highlight MRI regions• Tone: reassuring, supportive, avoiding jargon**As Data Scientist to a Doctor (3%)**:• Focus on model reliability, uncertainty & medical usefulness• Cites XAI results to justify the prediction• Maintains appropriate technical language for clinical audience	**6% (3% + 3%)**

Bonus

- Comparisons between LRP vs Grad-CAM interpretability
- Discussion of false-positive / false-negative clinical consequences
- Quantification of explanation metrics (e.g., region relevance score)
